

TOPTEC® is a new generation revolutionary product, designed for casting floor concrete in one-piece work (monolithic). The cast concrete contains an additive providing a solution for floor coating and sealing.

TOPTEC® concrete additive protects the concrete from chemicals, abrasion and bad effects in a work environment where high level of cleanliness is required and in areas that are subjected to heavy and aggressive traffic and where long life durability is needed.

TOPTEC® and its various components is a fruit of the research, the development and the advanced manufacturing process of Sealtec construction company and its experience. This product has proved its supreme efficiency and has also proved to be a great time and money saver. Above all, **TOPTEC®** proved its peeling off possibility as in multilayered floors traditional coatings.

Adding **TOPTEC®** to concrete has brought in a new generation of high quality concrete, with improved physical qualities and durability. You can obtain a minimal porous concrete, high mechanical strength.

These properties are the results of chemical activity in the blend and the physical ability to penetrate into small porous. The final outcome is concrete that is impenetrable to liquids and gasses that contain aggressive ingredients such as chlorides, carbon dioxide, sulphates, alkalies, acids, etc.

TOPTEC® does not affect the performance of the concrete casting and/or its curing.
